

There are 3 types of site for vaccinations:

- Acute Hospital Hubs (e.g. Addenbrookes, Papworth)
- Primary Care Networks (PCN - local vaccination sites, usually GP practices)
- Large Vaccination Sites (part of national program – not up in Cambridgeshire and Peterborough yet, though 2 in pipeline)

Initially the Hospital Hubs focused on the over 80s (because the Primary Care sites weren't open) but are now focused more on health and care staff.

GPs will contact patients to get vaccinated at PCN sites – primarily they will deal with patients registered in the practices the network covers, but there may be some sharing of patients too. As more of the AstraZeneca vaccine is delivered more GP surgeries will be able to deliver from their own practices (at the moment PCN vaccination sites have to be able to deliver both the Pfizer and AstraZeneca vaccine).

Large Vaccination Sites are intended to 'mop up' where people haven't been contacted by either hospital or GP. When they go live in Cambridgeshire & Peterborough contact will be made by generic letter and they can go online or ring up to book (much the same as the regional Stevenage site, though a bit closer to home).

We have been asked to encourage people not to call their GP but to wait to hear from them, or (once open) the large vaccination sites.

The latest information on the vaccination program in our area, including a full list of sites and which GPs are in which PCN, can be found here:
